Garden Annual

1953

The Beauty of the Lawn **ADDS TO THE CHARM OF THE HOUSE**

840 AMERICAN RYE GRASS

The finest Winter Lawn Grass for the South. It is a fast-growing annual with broad, flat blades of delightful green color. Will produce a beautiful and luxuriant solid carpet of grass within two weeks. Sow at the rate of 1 pound to 75 to 100 square feet. On new lawns a rake can be used in mixing the seed into the surface soil. When sowing on a Bermuda or Carpet lawn the grass should be mowed as closely as possible before sprinkling the seed, and for better germination the lawn should be given a light covering with good soil or Peat Moss. **Lb. 35c.; 5 lbs. \$1.35, postpaid.** Not prepaid: 10 lbs. \$1.55; 100 lbs. \$12.50.

829 FANCY BERMUDA GRASS

The most dependable Summer Lawn Grass for Southern gardens. Makes a tough, even, clumpless turf that recovers quickly after cutting. Lasts for years and stands long, hot, dry summers without injury. Succeeds on nearly all types of soil. Germinates in 20 to 30 days with proper soil-moisture. For good, heavy stand, sow at the rate of 4 pounds to 1000 square feet, from March to September.

The seed can be sown on top of your winter grass after mowing same closely. Pass a rake over the grass to prevent the fine seeds from sticking to the blades. Although a perennial, the top of Bermuda Grass dies down during cold winters, but will come up again the next spring. The Bermuda Grass seed we offer is the finest, leaf-cultivated, turf-producing strain, testing 98 per cent purity or better. **Lb. 85c.; 5 lbs. \$3.75, postpaid.** Not prepaid: 10 lbs. \$5.90; 100 lbs. \$54.00.

826 HULLED BERMUDA GRASS

Reuter offers his extra-fancy Bermuda Grass with the hulls removed, a new process which gives much quicker germination. Under favorable moisture and soil-conditions, Reuter's Hulled Bermuda Grass will germinate in 8 to 10 days, almost as quick as Rye Grass. It is more economical because half the quantity is necessary to sow 100 square feet of lawn. Be sure to specify hulled seed when ordering, as otherwise the unhulled seed will be shipped. **Lb. \$1.10; 5 lbs. \$5.00, postpaid.** Not prepaid: 10 lbs. \$8.30; 100 lbs. \$78.00.

828 ZOYSIA JAPONICA

This fine-leaved lawn grass will thrive well both in full sun and in dense shade. Because it grows only 3 to 4 inches tall, it requires little mowing. The new strain we are offering grows as rapidly as St. Augustine Grass in warm weather, is immune to chinch bugs and has a tendency to crowd out crab grass. Formerly this grass could not be planted from seed, for seed production was exceedingly difficult; however, much experimentation and laboratory work has now made this excellent lawn grass available to you in its easiest planting form—seed. Full directions for planting with each purchase. **Lb. \$6.00; 5-lb. bag, \$25.00, postpaid.**

830 CARPET GRASS

Splendid Lawn Grass for the South. Better than Bermuda for poor, sandy soil and semi-shady lawns. It is a perennial, spreading by creeping stems which root at every joint, thus forming a close, compact turf. Germinates in 20 to 30 days if soil is kept properly moist. For a closely matted lawn, sow at the rate of 5 pounds per 1000 square feet from March until July. Like Bermuda Grass, the seed may be sown on top of your winter lawn after close mowing. Reuter offers only stock that has been carefully analyzed for purity and germination by Senior Seed Analysts. **Lb. \$1.10; 5 lbs. \$5.00, postpaid.** Not prepaid: 10 lbs. \$7.50; 100 lbs. \$70.00.

ST. AUGUSTINE GRASS

In Florida, and to an ever-increasing extent in New Orleans, the shady lawn problem has been solved by the use of this perennial creeping grass. It is a deep green, broad-bladed grass, creeping by means of surface runners. Somewhat similar to Carpet Grass, except it has a better color and stays green during ordinary winters. Seed is not available, but lawns are established with rooted runners, laid down in parallel trenches about 8 to 10 inches apart and 2 inches deep, with a flat slope on one side and nearly vertical on the other. A bushel will plant from 150 to 200 square feet, depending on how close it is set. Not prepaid: Bus. \$2.25; 10 bus. \$20.00.

PETUNIA

MARIGOLD, Cupid

SNAPDRAGON

1176 **Double Hybrid, Mixed Colors.** This Snapdragon produces flowers that are sensational both in large size and in unusual and amazing formations. As is the case in all hybrids, the plants are larger and vary from 20 to 30 inches tall. Pkt. \$1.00.

VERBENA

How to Grow Iris

Irises may be grown very successfully in Southern gardens if proper growing conditions are provided for them, and, in selecting the particular types that are best suited for your garden, consideration should be given to location and soil. In the planting instructions given below we have emphasized the requirements of each type.

German Irises require a well-drained, sunny location. Clay soils should be mixed to a depth of 1 foot with a liberal quantity of sharp sand. Do not plant too deep. The top of the rhizomes should be at ground-level. Use no fertilizer except Bone Meal, about a closed handful to each plant, and after planting, water thoroughly to settle soil. Cultivate the surface after each rain and water only when soil is dry. Remove old leaves as they wither sufficiently to pull them off. Proper distance between plants, 1 foot.

Louisiana Irises do equally well in sunny or partially shaded locations if properly watered. Clay soils should be loosened by spading in a liberal quantity of Peat Moss or you may use Krilium. Plant the roots about 4 inches deep and 1 foot apart. Leave them undisturbed in the ground until they are crowded for space, when they should be lifted and separated. This is best done in late summer or fall.
